## GI HEMOSTASIS SOLUTIONS

EASIER DEPLOYMENT  
OF MULTIPLE CLIPS

# The Next Generation, for GI Hemostasis

## Improved Visualization

The unique, small 10mm remaining clip component takes up less space in the field of view and allows Gastroenterologists to see tissue defects more easily for improved visualization.

## Unlimited Opening and Closing

Unlike other HemoClips that can only be opened and closed up to 5 times, DuraClip™ can be opened and closed an unlimited amount of times prior to deployment to ensure you gain precise clip positioning.

The shorter clip design allows Gastroenterologists to place more clips in closer proximity to the mucosal defect and to one another, which may help improve hemostasis. The thin leading clip arm is narrower than competition which allows for greater visibility to the defective mucosa.

DuraClip™  
Repositionable  
Hemostasis Clip

## Rotating and Positioning Features for More Accurate Clip Placement

The unique design of DuraClip™ helps provide better access to tissue for ideal clip placement. DuraClip™ Repositionable Hemostasis Clip offers true 1:1 rotation.

### Designed for Defects of Various Sizes

DuraClip™ features an 11 mm jaw opening that allows physicians to grasp a sizeable amount of tissue – making it a versatile solution for lesions up to 3cm for mucosal/sub-mucosal defects and 1.5cm for polyps. Treatment indications for DuraClip™ also include:

- Bleeding Ulcers
- Diverticula in the Colon
- Gastrointestinal Tract  
Luminal Perforations < 20mm

GI HEMOSTASIS  
SOLUTIONS

### Ergonomic, Easy-to-Use Design

The ergonomic handle has a familiar, intuitive design for **one or two-hand clip deployment**. It features a comfortable, designated space that allows you to stabilize the device.

One-step clip deployment gives both a tactile and audible response, once clip is deployed.
