
**Post-operative
wound drainage**

- › High-vacuum drainage
- › Low-vacuum drainage
- › Gravity drainage

The product portfolio for postoperative wound drainage from pfm medical ag offers a variety of systems for drainage by high-vacuum, low-vacuum and gravity for many clinical applications.

www.pfmmedical.com

OR-system / Ward-system

The **OR-system** is a pre-evacuated reservoir with connecting tube for post-operative high-vacuum Redon wound drainage and is suitable for initial placement during surgery.

The **ward-system** is a pre-evacuated reservoir for post-operative high-vacuum Redon wound drainage and is intended for replacement during patients treatment.

View

Benefits

High initial vacuum

The Redon bottle has a high initial vacuum of max. 98,000 Pa.

Redon connection tube

The tube with transparent universal Redon connector CH 06 - CH 18 for connection to the drain is pre-attached.

Several system sizes

200 ml and 400 ml systems provide a 50 ml safety volume.

Details

- ▶ Plug connection or Luer-Lock connection
- ▶ Crystal-clear material for reliable qualitative assessment of secretions
- ▶ Rough and fine graduation for at-a-glance information about current fill levels
- ▶ Integrated vacuum indicator with qualitative min. / max. indication
- ▶ Quick-release fasteners included
- ▶ Double packed, sterile
- ▶ Latex-free
- ▶ Redon bottle DEHP-free

Technical Data

- ▶ **Bottle volume:** 200 ml - 600 ml

Redon-Sets

The **Redon-Set** for post-operative wound drainage consists of a Redon bottle, a connecting tube, a Redon drain and a single-use needle. The Redon-Set is suitable for initial placement during surgery and contains all for the drainage needed components.

View

Benefits

Complete set

In addition to the Redon-bottle with connecting tube, the set also contains a drain and a suitable disposable needle.

Redon connection tube

The tube with transparent universal Redon connector CH 06 - CH 18 for connection to the drain is pre-attached.

High initial vacuum

The Redon bottle has a high initial vacuum of max. 98,000 Pa.

Several system sizes

200 ml and 400 ml systems provide a 50 ml safety volume.

Details

- ▶ Luer-Lock connection

Redon drains / U-Drains

The cross-perforated **Redon drains** are suitable for use with high-vacuum wound drainage systems for post-operative wound drainage.

The special cross-perforated **U-Drains** improve drainage performance by 1.5 to 2.5 times compared with conventional Redon drains. ^[1]

View

Benefits

Even suction with U-Drains

The gently rounded drainage holes with a linear increase in diameter towards the distal end ensure even suction across the entire length of the drain.

Easy to reposition

The triple ring marking makes repositioning easy.

Configuration with pre-attached needle

The pre-attached needle, made from high-quality stainless steel always provides a perfectly sharp needle for optimal placement.

Detail-View

Details

- ▶ Made from medical PVC, DEHP-free
- ▶ Precision-manufactured drainage holes
- ▶ Radiopaque
- ▶ Double packed, sterile
- ▶ Latex-free

Redon-Mini Set

The manually compressible bellows of the **Redon-Mini Set** uses a low vacuum (approx. 10,000 Pa initially) for post-operative wound drainage. The Redon-Mini Set includes a drain and a pre-attached stainless steel needle.

View

Benefits

Quick qualitative assessment of secretion

By using transparent material the drained fluid can be quickly assessed.

Safe drain connection

The plug or screw connection is used for quick and safe drain fitting.

Details

- ▶ Initial low vacuum approx. 10,000 Pa
- ▶ Redon drain DEHP-free
- ▶ Seamless transition to needle
- ▶ Fully radiopaque
- ▶ Double packed, sterile
- ▶ Latex-free

Technical Data

- ▶ **Volume:** 30 ml / 150 ml
- ▶ **Drain size:** CH 06 / CH 08
- ▶ **Length:** Redon drain (30 cm), Cross-perforation (5 cm)

Low-vacuum system

The **Low-vacuum system** is a large capacity wound drainage system for manual evacuation in sensitive tissue using a constant low vacuum.

View

Benefits

Gentle application

The large capacity wound drainage system for manual evacuation using a constant low vacuum ensures gentle wound drainage in sensitive tissue (e.g. breast tissue).

Improved patient and user protection

Two one-way valves efficiently prevent backflow thus minimising the risk of retrograde wound infections.

Minimised risk of cross-contamination

Cost-effective replacement bags with one-way valve minimise the risk of cross-contamination.

Pre-configured sets

The pre-configured set consists of bellows, connection tube, Y-connector, Redon drains and optionally a disposable guide needle.

Assembly with silicone drains also optionally available.

Details

- ▶ Large capacity 250 ml bellows to increase the time intervals between re-evacuations and to reduce the total number of re-evacuations required
- ▶ Pre-attached Y-connectors with closed distal ends allow the optional use of one or two Redon drains (CH 08 - CH 18) without the need for additional connectors, adaptors or clamps
- ▶ Hydrophobically coated filter on the drainage bag for hygienic pressure equalisation without the risk of contact with the secretion
- ▶ Safety cap at the bottom outlet of the bellows to prevent spillage of residual fluid
- ▶ User-friendly design
- ▶ Redon drains DEHP-free
- ▶ Latex-free

Technical Data

- ▶ **Length:** Redon drain 50 cm, Perforation 15 cm
- ▶ **Volume:** Bellows 250 ml, Drainage bag 700 ml

Soft-Drain Flat Active

The **Soft-Drain Flat Active** consists of a flat silicone drain and a low-vacuum reservoir for suction-assisted wound drainage.

View

Benefits

Active assistance of suction

The included reservoir creates a negative pressure and assists actively the suction of the drainage.

Outstanding safety

The inner ribbing of the flat drain prevents it from collapsing even at higher pressures or when a vacuum is applied.

Easy drain removal

The seamless soft coupling between the drain and tube enables the safe and gentle removal of inserted drains.

Technical Data

- ▶ **Full length:** 80 cm
- ▶ **Drain length:** 20 cm

Details

- ▶ Transparent 150 ml low-vacuum silicone reservoir with anti-reflux valve and universal hanger
- ▶ Graduation of the reservoir for at-a-glance information about current fill levels
- ▶ Perforated at full length with gently rounded atraumatic holes
- ▶ Flat drain made from 100% medical silicone
- ▶ Central opening
- ▶ Fully radiopaque drain tube
- ▶ Double packed, sterile
- ▶ Latex-free

Ordering Information

REF	Height x width	Perforation	Volume reservoir	PU
0615-0072	3 x 7 mm	20 cm (full)	150 ml	10
0615-0102	4 x 10 mm	20 cm (full)	150 ml	10

Soft-Drain Flat Reservoir

The **Soft-Drain flat reservoir** is a transparent low-vacuum silicone reservoir with an anti-reflux valve and a universal hanger.

View

Benefits

Graduation

The graduation provides an at-a-glance information about current fill levels of the reservoir.

Anti-reflux valve

The Anti-reflux-valve prohibits a back-flow of collected wound fluid into the drainage.

Universal hanger

By use of the universal hanger, the system can easily be attached at any bed position.

Details

- ▶ Reservoir made from 100% silicone
- ▶ Sterile
- ▶ Latex-free

Technical Data

- ▶ **Volume:** 100 ml - 400 ml

Ordering Information

Soft-Drain Flat

The **Soft-Drain Flat** is a flat silicone drain for open or half-open wound drainage by gravity.

View

Details

- ▶ Flat drain made from 100% medical silicone
- ▶ Perforated at 3/4 length or full length with gently rounded atraumatic holes
- ▶ Central opening
- ▶ Fully radiopaque drain tube
- ▶ Double packed, sterile
- ▶ Latex-free

The **Soft-Drain Flat Set** consists of a flat silicone drain and a collection bag.

Benefits

Outstanding safety

The inner ribbing of the flat drain prevents it from collapsing even at higher pressures or when a vacuum is applied.

Easy drain removal

The seamless soft coupling between the drain and tube enables the safe and gentle removal of completely inserted drains.

Set configuration

The pre-attached collection bag allows the usage as closed system instantly.

Technical Data

- ▶ **Full length:** 80 cm
- ▶ **Drain length:** 20 cm

Dispo-Flow / Endo-Drain Set

The **Dispo-Flow** is a capillary drain made from silicone with inner ribbing for gentle wound drainage by means of capillary suction and gravity.

View

Benefits

Gentle drainage

The Dispo-Flow is suitable for wound drainage in indications when the application of a low-vacuum is contraindicated, but sufficient drainage performance is required.

Technical Data

- ▶ **Width:** 8 mm - 12 mm
- ▶ **Length:** 30 cm / 50 cm

Details

- ▶ Capillary drain made from 100% medical silicone
- ▶ Central opening
- ▶ Fully radiopaque
- ▶ Double packed, sterile
- ▶ Latex-free
- ▶ DEHP-free

The **Endo-Drain** is a fluted silicone gravity drain with pre-attached needle for open and half-open wound drainage. The Endo-Drain Set contains a pre-attached needle.

View

Benefits

Excellent placement

The pre-attached needle, made from high-quality stainless steel always provides a perfectly sharp needle for optimal placement.

Easy removal

The design of the drainage channels makes the removal of the drain easy because of the low incidence of tissue growth.

Kink resistant

The structure of the drainage material ensures a high level of kink resistance.

Easy inspection

The transparent connection tube allows an easy visual inspection of the tube.

Very good biocompatibility

The fluted drainage tube is made from 100% medical silicone for very good biocompatibility.

Details

- ▶ Fully radiopaque
- ▶ Double packed, sterile
- ▶ Latex-free

Technical Data

- ▶ **Drain length:** 120 cm
- ▶ **Drainchannel length:** 40 cm
